Comments: _____

Intensity estimates.

Indicate any regions of the planet which show intensity variations.

Intensity estimates are made using the following scale:

- 0 - White
- 1 - General colour of the planet's disk
- 2 - Shadings that are very hard to see
- 3 - Shadings that can be seen with certainty
- 4 - More definite shadings (rare)
- 5 - Even darker shadings; seen only very occasionally

Phase Estimates

Predicted phase: %

Observed phase: %

Venus - General Features Guide

Typical features that may be observed on Venus are:

- Cusp caps
- Cusp bands
- Irregularities in the line of the terminator
- A bright limb band extending wholly or partially from cusp to cusp
- Dark hemisphere illumination
- Cusp extensions
- Dark shadings across the planet's disk
